INTRODUCTION

TITLE: ONLINE FOOD ORDERING SYSTEM

An online food ordering system is a digital platform that enables customers to browse, select, and order different types of food items through the internet. This innovative system has revolutionized the way people order and receive food, providing convenience, efficiency, and a seamless experience for both customers and restaurant owner.

An online food ordering system allows your business to accept and manage orders placed online for delivery or takeaway. Customers browse a digital menu, either on an app or website and place and pay for their order online. Venues will then receive the order details via their chosen online food ordering system and produce the order ready for delivery or customer pickup. While online food ordering systems have been around for several years, demand for this technology took off during the pandemic. With extended lockdowns and restrictions, hospitality venues quickly pivoted their businesses to offer online ordering solutions so their customers could continue to enjoy restaurant-quality food at home.

BENEFITS OF ONLINE FOOD ORDERING SYSTEM

1. Accessibility:

- Customers can access the online food ordering system 24/7 from the comfort of their homes or any location with internet connectivity.
- The system is accessible through various devices, including smartphones, tablets, and computers, making it convenient for users on the go.

2. User-friendly Interface:

- The platform typically offers a user-friendly interface with easy navigation, allowing customers to browse menus, view food options, and place orders effortlessly.
- Features such as search filters, images, and detailed blogs enhance the user experience.

3. Extensive Food Choices:

- Customers can explore a wide range of dishes, menu options within the online platform, providing them with diverse choices based on their preferences.

4. Secure Payment Options:

- Online payment features provide secure and convenient transactions. Customers can choose from various payment methods, including credit cards, digital wallets, and other online payment options and most important cash on delivery is also acceptable.
- 

BENEFITS OF ONLINE FOOD ORDERING SYSTEM

5. Order Tracking:

- Real-time order tracking features enable customers to monitor the status of their orders from preparation to delivery, enhancing transparency and reducing uncertainties.

6. Delivery and Pickup Options:

- Customers can opt for home delivery or choose to pick up their orders directly from the restaurant, offering flexibility based on their preferences and schedule.

7. Reviews and Ratings:

- Integrated review and rating systems allow customers to share their feedback on the food quality, service, and overall experience, helping others make informed decisions.

8. Loyalty Programs and Discounts:

- Many online food ordering systems incorporate loyalty programs, discounts, and promotions to encourage customer retention and attract new users.

9. Integration with Social Media:

- Integration with social media platforms enables users to share their food experiences, recommendations, and reviews with their social circles, contributing to the system's marketing and community-building aspects.

10. Benefits for Restaurants:

- For restaurants, an online ordering system can streamline operations, reduce errors, and expand their customer base by reaching a broader online audience.

TECHNOLOGY USED IN THE WEBSITE

Website development is a dynamic field that relies on a combination of technologies to create engaging, functional, and visually appealing online experiences. Two fundamental languages that play a crucial role in this process are HTML (Hypertext Markup Language) and CSS (Cascading Style Sheets). Together, these technologies form the backbone of the modern web, enabling developers to structure content and enhance its presentation.

EXPLANATION OF HTML (HYPERTEXT MARKUP LANGUAGE) FOR STRUCTURE:

HTML, or Hypertext Markup Language, is the foundational language of the World Wide Web. It serves as the backbone for creating the structural framework of a webpage. HTML uses a markup system, utilizing tags to define various elements on a web page such as headings, paragraphs, images, links, and more. Each HTML tag encapsulates content, providing browsers with instructions on how to display and organize information.

TECHNOLOGY USED IN THE WEBSITE

OVERVIEW OF CSS (CASCADING STYLE SHEETS) FOR STYLING:

While HTML defines the structure of a webpage, CSS (Cascading Style Sheets) takes center stage in the realm of styling and design. CSS allows developers to control the visual presentation of HTML elements, ensuring a consistent and visually appealing user experience. CSS achieves this through a style rule mechanism. Selectors identify HTML elements, and declarations within the rule specify how those elements should be styled. Properties like color, font size, margin, padding, and more are used to define the appearance.

OVERVIEW OF JAVASCRIPT FOR CREATING WEBPAGE:

JavaScript, as a crucial part of web development, complements HTML and CSS by adding interactivity, functionality, and dynamism to websites. It enables me to create engaging user experiences and perform various tasks on the client-side.

DECODING of the code of login.html

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <link rel="stylesheet" href="style.css">
  <link href="https://fonts.googleapis.com/css2?family=Abril+Fatface&family=Catamaran:wght@200&family=Courgette&family=Dancing+Script:wght@700&family=...>
  <script src="https://kit.fontawesome.com/f30fac2c61.js" crossorigin="anonymous"></script>
</head>
```

```
<div class="form">
  <h2>Login Here</h2>
  <input type="email" name="email" placeholder="Enter Email Here">
  <input type="password" name="" placeholder="Enter Password Here">
  <button class="btnn"><a href="#">Login</a></button>

</div>
```

DECODING OF LOGIN PAGE

File Name :- cse326.html

<!DOCTYPE html>: Declaration that specifies the document type and version of HTML being used (in this case, HTML5).

<HTML lang="en">: Opening tag for the HTML document, specifying the language as English.

<head>: Contains meta-information about the document and links to external resources.

<meta charset="UTF-8">: Sets the character encoding to UTF-8, allowing the page to support various characters and symbols.

<title>Login Page</title>: Sets the title of the webpage displayed in the browser tab.

<link rel="stylesheet" href="styles.css">: Links an external CSS file named "styles.css" for styling the webpage.

<body>: The main content of the webpage.

<div class="logo">: A division or container with the class "logo" for styling purposes.

<img src='https://www.educationworld.in/wp-

content/uploads/2019/04/LPU-Logo-02.jpg' width="400" height="auto"

alter="campus logo">: Inserts an image with a specific URL and attributes for width, height, and alternative text.

<h1>Events Calender</h1>: Displays the heading "Events Calendar" within the "logo" div.

<div class="login-container">: Another division for organizing login-related content.

<h2>Login</h2>: Displays the heading "Login" within the "login-container" div.

<form>: Starts a form for user input.

<div class="input-group">: A container for form elements.

<label for="username">Registration no:</label>: Provides a label for the username input field.

<input type="text" id="username" name="username" required>: Creates an input field for the username, specifying it as a text type and requiring user input.

Decoding the code of style.css

```
.form{
  width: 250px;
  background-color: green;
  height: 250px;
  background: linear-gradient(to top, rgba(0,0,0,0.5)50%, rgba(0,0,0,0.5)50%);
  position: absolute;
  top: -10px;
  left: 1190px;
  border-radius: 30px;
  padding: 25px;
}

.form h2{
  width: 235px;
  font-family: sans-serif;
  text-align: center;
  color: #ff7200;
  font-size: 22px;
  background-color: #fff;
  border-radius: 10px;
  margin: 2px;
  padding: 8px;
}

.form input{
  width: 240px;
  background-color: green;
  height: 35px;
  background: transparent;
  border-bottom: 1px solid #ff7200;
  border-top: none;
  border-right: none;
  border-left: none;
  color: lightcoral;
  font-size: 15px;
  letter-spacing: 1px;
  margin-top: 30px;
  font-family: sans-serif;
```

```
.form input:focus{
  outline: none;
}

::placeholder{
  color: ■ #fff;
  font-family: Arial;
}

.btnn{
  width: 240px;
  height: 40px;
  background: ■ #ff7200;
  border: none;
  margin-top: 30px;
  font-size: 18px;
  border-radius: 10px;
  cursor: pointer;
  color: ■ #fff;
  transition: 0.4s ease;
}

.btnn:hover{
  background: ■ #fff;
  color: ■ #ff7200;
}

.btnn a{
  text-decoration: none;
  color: □ black;
  font-weight: bold;
}

.form .link{
  font-family: Arial, Helvetica, sans-serif;
  font-size: 17px;
  padding-top: 20px;
  text-align: center;
}

.form .link a{
  text-decoration: none;
```

```
}  
.btnn a{  
    text-decoration: none;  
    color: ■black;  
    font-weight: bold;  
}  
.form .link{  
    font-family: Arial, Helvetica, sans-serif;  
    font-size: 17px;  
    padding-top: 20px;  
    text-align: center;  
}  
.form .link a{  
    text-decoration: none;  
    color: ■#ff7200;  
}  
.liw{  
    padding-top: 15px;  
    padding-bottom: 10px;  
    text-align: center;  
}
```

DECODING OF LOGIN PAGE

File Name :- style.css

Body: Defines styles for the entire document's body, including font-family, margin, padding, flex box display, background color, and an image as a background with fixed attachment and full-size coverage.

.login-container: Styles specific to the container holding the login form - background color, padding, border-radius, and a box-shadow effect.

.logo: Styles for the logo section - text color, font-family, border, and padding.

Form Styles

form: Sets the form display as a flex column.

.input-group: Defines margins between input groups.

label: Styles for labels, including margins, display as a block, and bold font.

input[type="number"], input[type="password"]: Styles for number and password input fields - padding, font-size, border-radius, and border.

Link Styles

a: Initial styling for links - default color, no underline, displayed as block-level element, and padding.

a:visited: Styling for visited links - changes the color.

a:hover: Styling for links on hover - changes the color.

a:active: Styling for links when clicked - changes the color.

a: The same selector is reused multiple times to define various link styles, which could potentially cause conflicting styles.

a:focus: Styles links on focus - removes the default outline.

Overall, these styles aim to create a centered login form with specific formatting for input fields and custom link styles for visual interaction cues. The CSS code aims to provide a cohesive and styled appearance to the login page elements.

TEAMWORK

Team Members : Vishwas Choudhary (me) (Reg No. – 12319190)

Sourav Kumar Dey (Reg N0. – 12316959)

Aman Kumar (Reg No. – 12318896)

In the project, I made the JAVA SCRIPT part of the project which makes the website responsive, and given some valuable ideas to enhances user experience in CSS. I helped in various parts of CSS where it needs to be change and also make the report of project . Sourav Kumar Dey has made the HTML part to make the main page of the website and made the CSS part to make the website attractive, accurate and made the main content the website which looks so effective and professional. Aman Kumar has made a good contribution on making the HTML part of the project.

CONCLUSION

The development of an online food ordering system website represents a significant leap forward in catering to the evolving needs and preferences of modern consumers. The integration of technology into the food industry has not only enhanced the convenience for customers but has also provided numerous benefits for restaurant owner.

The teamwork project involving HTML, CSS and JAVA SCRIPT has been a collaborative journey that reflects the power of effective cooperation and shared goals in web development. Throughout the process, we have witnessed the fusion of creativity and technical skills, resulting in the creation of a visually appealing and functionally robust web project.

Our teamwork project incorporating HTML, CSS, and JavaScript has been an exciting and enriching journey, showcasing the harmonious integration of front-end technologies to create a dynamic and interactive web experience.

Teamwork project in HTML, CSS, and JavaScript has been a multifaceted learning experience, combining technical proficiency, effective collaboration, and a user-centric approach. As we conclude this project, we carry forward not just a well-executed web application but a wealth of insights and experiences that will undoubtedly shape our future endeavors in web development.
